PROJECTS

[Ancient Pottery](#) | [Live](#) | [Server side code](#) | [Client side code](#)

- ❖ Responsive, logged-in users can purchase, admin and logged-in users have managed a separate dashboard, where users can manage orders and give reviews.
- ❖ Purchase system managed by stripe, admin can add products, make an admin, and manage all orders on the dashboard. Admin can use this website for different purposes.
- ❖ ReactJs project with material UI, react-router, private route, nodeJs, context Api, Jwt token, and firebase authentication and hosting. Database managed by MongoDB and Heroku server.

[Travel in Nature](#) | [Live](#) | [Server side code](#) | [Client side code](#)

- ❖ Built Travel-tour based responsive project, visitors can see the package but logged-in users can buy any tour packages and have the option to delete the order.
- ❖ Admin manages this project by adding packages, updating status, and having a delete order option.
- ❖ Here I used ReactJs, react-router, private route, nodeJs, material Ui, context Api, firebase email, password, and google authentication and hosting. Database with MongoDB and Heroku server.

[Angelhope specialized Hospital](#) | [Live](#) | [Github code link](#)

- ❖ Responsive in mobile and desktop, and logged-in users can view package details and book a doctor for individual appointments. Users can join our community and enjoy social activities.
- ❖ Admin can use this website for different purposes or different medical niches.
- ❖ ReactJs based project with bootstrap, nodeJs, react-router, private route, context Api, firebase authentication, and hosting. Database managed by MongoDB.
